

What conditions can you prescribe for?

Tom Parks - 2026-03-21 - [Services](#)

We prescribe for the following conditions:

- Hypothyroidism, where recent blood tests are available
- Infections of the gut or other microbiomes
- Hair loss
- Varied conditions that require low-dose naltrexone

We do not prescribe hormones, opioids or unusual treatments for serious diseases.

We cannot prescribe for:

- Opiates
- Sedatives
- Laxatives
- Pregabalin
- Gabapentin
- Controlled drugs.
- Hormones
- Dermatological preparations

Our prescriber cannot initiate a prescription for T3 if a patient has never been on it before. T3 must first be recommended by an endocrinologist or GP, or the patient must already be currently using it. Once this is established, our prescriber can create a prescription for T3 and assist with adjusting doses as needed.
